

Leslie®

MODEL 3300W SPEAKER

The Leslie 3300W **stands only 31” tall, a throw back to the lowboy designs of years past.** This new Leslie speaker does what those vintage cabinets couldn't do... deliver a powerhouse of **bass response.**

Designed for the demanding player, who desires the traditional look of a real Oak veneered cabinet, and the sound to move mountains. This single-channel Leslie features a two-speed horn rotor coupled to our new design horn-driver and a custom 15” woofer. Firing into the Bass rotor.

The 3300W features the new “Dual-Race” horn bearing that improves radial and axle load balance, for low noise rotor performance.

The Leslie 3300, is powered by a 300-Watt RMS solid-state amplifier with a real vacuum tube preamp. 11-pin and 8-pin Leslie sockets allow connection and onboard control with Hammond Organs, Most other electronic organs and keyboards can hook up to the 3300W using a ¼” cable and optional footswitch.

Available November 2015

Leslie 3300W Specifications
